Copy the product code and the activation code to the input field of the "keygen". You can get the product code and activation code from the bottom left corner of Autocad window. Execute the "keygen" and get the file "dec.crf" from the desktop. Launch Autodesk Autocad. Make a new file and paste the dec.crf into it. Copy and paste the "dec.crf" into your Autocad project. The file "dec.crf" is your license and you don't need to pay for license again. If you want to see if there is any file updates, you can click "Check for Updates" button in the bottom left corner of Autocad window. When the number of the updates is higher than zero, it means there is a file update and you can download it to your computer. Q: How to determine which part of the page is being scrolled in jQuery? If I have a single page with multiple sections and an auto-scrolling slideshow in the middle, is there a way to determine which part of the page is being scrolled when the page scrolls? The slideshow is in the body, so: \$(window).scroll(function () { console.log(window); // The body }); How can I find which part of the page is being scrolled? A: From what I can tell, this will work regardless of the section and you can bind to the window or the body like you mentioned. I'm using it to learn, and it works well for that. I created a fiddle. \$(function() { \$(window).scroll(function() { var start = 0; var stop = \$(window).scrollTop(); var width = \$(window).width(); var current = 0; var num_of_slices = \$('#slideshow-wrapper').children().length; console.log(start, stop, current); console.log(width); \$.each(\$('.section'), function(key,
